

Maria J Castellano Fle

Right here, we have countless ebook **Maria J Castellano Fle** and collections to check out. We additionally present variant types and along with type of the books to browse. The conventional book, fiction, history, novel, scientific research, as with ease as various extra sorts of books are readily to hand here.

As this Maria J Castellano Fle, it ends up mammal one of the favored book Maria J Castellano Fle collections that we have. This is why you remain in the best website to look the unbelievable ebook to have.

ANASTASIA GREYSON

Beyond Language Boundaries Springer Nature

This book focuses on recent advances in our understanding of wild edible mycorrhizal fungi, truffle and mushrooms and their cultivation. In addition to providing fresh insights into various topics, e.g. taxonomy, ecology, cultivation and environmental impact, it also demonstrates the clear but fragile link between wild edible mushrooms and human societies. Comprising 17 chapters written by 41 experts from 13 countries on four continents, it enables readers to grasp the importance of protecting this unique, invaluable, renewable resource in the context of climate change and unprecedented biodiversity loss. The book inspires professionals and encourages young researchers to enter this field to develop the sustainable use of wild edible mushrooms using modern tools and approaches. It also highlights the importance of protecting forested environments, saving species from extinction and generating a significant income for local populations, while keeping alive and renewing the link between humans and wild edible mushrooms so that in the future, the sustainable farming and use of edible mycorrhizal mushrooms will play a predominant role in the management and preservation of forested lands.

Nuevo método teórico y práctico de lengua francesa Houghton Mifflin Harcourt

How did the breakdown of Roman rule in the Iberian peninsula eventually result in the formation of a Visigothic kingdom with authority centralised in Toledo? This collection of essays challenges the view that local powers were straightforwardly subjugated to the expanding central power of the monarchy. Rather than interpret countervailing events as mere 'delays' in this inevitable process, the contributors to this book interrogate these moments to uncover the hidden agency of individuals and local authorities. What emerges is a story of contested interests seeking cooperation through institutions and social practices that were flexible enough to stabilise a system that was hierarchical yet mutually beneficial for multiple social groups. By examining the Visigothic settlement, the interplay between central and local power, the use of ethnic identity, projections of authority, and the role of the Church, this book articulates a model for understanding the formation of a large and important early medieval kingdom.

Construction and Building Research Springer

Early and indispensable study of Maya language, published for the Peabody Institute. A must-have for any student of the Maya. *7th International Workshop on Fuzzy Logic and Applications, WILF 2007, Camogli, Italy, July 7-10, 2007, Proceedings* Editorial MAXTOR

Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where

all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.

4T.HISTORIA GENEALOGICA DE LA CASA DE LARA Springer Nature

Remaking the Nation presents new ways of thinking about the nation, nationalism and national identities. Drawing links between popular culture and indigenous movements, issues of 'race' and gender, and ideologies of national identity, the authors draw on their work in Latin America to illustrate their retheorisation of the politics of nationalism. This engaging exploration of contemporary politics in a postmodern, post new-world-order uncovers a map of future political organisation, a world of plurinations and ethnicised identities in the ever-changing struggle for democracy.

Applications of Fuzzy Sets Theory Academic Press

This book focuses on how to induce clinical arrhythmias in the electrophysiology (EP) laboratory, a procedure that is indispensable for analyzing the underlying mechanisms, and identifying the most effective treatment of the arrhythmia. In the main part of the book, the authors share their own experiences with 13 different medications that can be injected or infused for arrhythmia induction - ranging from isoprenaline and atropine to ephedrine - all of which can be easily found in any cardiology department. Each chapter begins with a description of the drug's chemical structure and mechanism of actions, then illustrates the infusion preparation, dosage and side effects and lastly analyzes its electrophysiological properties and highlights the most important clinical studies on it. For each drug the authors list - in dedicated tables - administration protocols from their own hospital. This book is of interest to postgraduate students, cardiology residents, cardiologists and pediatric cardiologists with special interest in arrhythmias, as well as to trainees, technicians and nurses involved in the EP lab.

Historia general de los hechos de los castellanos en las islas i tierra firme del mar oceano Lloyd's Register

Since its initial publication in 1990, this book has become a key work of contemporary feminist theory, and an essential work for anyone interested in the study of gender, queer theory, or the politics of sexuality in culture. This is the text where the author began to advance the ideas that would go on to take life as "performativity theory," as well as some of the first articulations of the possibility for subversive gender practices. Overall, this book offers a powerful critique of heteronormativity and of the

function of gender in the modern world.

Ensayo de una biblioteca española de libros raros y curiosos (4 Tomos) Routledge

The TCGOV 2005 international conference on e-government was held at the Free University of Bozen-Bolzano during March 2–4, 2005. The conference was initiated by the working group “Towards Electronic Democracy” (TED) of the European Science Foundation and was jointly organized by the Free University of Bozen-Bolzano, the Municipality of Bozen-Bolzano, the TED Working Group, and the IFIP Working Group 8.5. The conference addressed a large spectrum of issues that are relevant and have to be investigated for a successful transition from the traditional form of government to a new form known as e-government. The main focus was on the following topics: – improving citizen participation and policy making (e-democracy) – government application integration – semantic Web technologies for e-government – security aspects for e-government services Two sessions were dedicated to e-democracy, an emerging area within government that seeks to enhance democratic processes and provide increased opportunities for individuals and communities to be involved in governmental decisions. The contributions of these two sessions cover more fundamental results and insights as well as experiences from different countries. Another focus was on government application integration and the use of semantic Web technologies, which are important technical aspects on the agenda of e-government research. Different architectures for the integration and orchestration of distributed services and processes were presented along with two case studies. Three papers about Semantic Web technologies discussed the use of ontologies in e-government. Mushrooms, Humans and Nature in a Changing World Temple University Press

In this book, David Sowell traces the history of artisan labor organizations in Bogota and examines long-term political activity of Colombian artisans in the century after independence. Relying on contemporary newspapers, political handouts, broadsides, and public petitions, Sowell describes and analyzes the economic, social, and political history of the capital's artisan class, a middling social sector with very significant social and political strengths. Latin American labor history has heretofore focused almost exclusively on twentieth-century industrial or agrarian laborers. This is the first study in English of nineteenth-century Latin American artisans and one of the few treatments that spans the whole of nineteenth-century Colombian history. The rise and subsequent decline of artisan class political activity coincided with Colombia's integration into the world market. Initially petitioning for tariff protection, Bogota's craftsmen in time mobilized to address numerous issues, including industrial education, internal trade order, credit, and better health and educational facilities. The artisan class was a sizeable share of the urban electorate and, at the beginning of this period, was essentially cohesive. Sowell traces the transformation of Colombia's economy and the (mainly negative) effects its evolution had on bogotano artisans. By the end of the nineteenth century, the fragmentation of the artisan class had destroyed their broad mobilizations. No longer leaders of the Colombian labor movement, the artisans were replaced by laborers associated with industrial production, transportation systems, and the production of coffee. The study of artisan-based labor activity illuminates the foundations of contemporary Latin American societies. Sowell's examination of the political expression of artisan class interests and the social and political variables that affected those interests sheds light on the subsequent industrial development in Colombia as well as on the "modern" period of Latin American history.

Gender Trouble Springer Science & Business Media

Diagnostic Molecular Pathology: A Guide to Applied Molecular Testing is organized around disease types (genetic disease, infectious disease, neoplastic disease, among others). In each section, the authors provide background on disease mechanisms and describe how laboratory testing is built on knowledge of these mechanisms. Sections are dedicated to general methodologies employed in testing (to convey the concepts reflected in the methods), and specific description of how these methods can be applied and are applied to specific diseases are described. The book does not present molecular methods in isolation, but considers how other evidence (symptoms, radiology or other imaging, or other clinical tests) is used to guide the selection of molecular tests or how these other data are used in conjunction with molecular tests to make diagnoses (or otherwise contribute to clinical workup). In addition, final chapters look to the future (new technologies, new approaches) of applied molecular pathology and how discovery-based research will yield new and useful biomarkers and tests. Diagnostic Molecular Pathology: A Guide to Applied Molecular Testing contains exercises to test readers on their understanding of how molecular diagnostic tests are utilized and the value of the information that can be obtained in the context of the patient workup. Readers are directed to an ancillary website that contains supplementary materials in the form of exercises where decision trees can be employed to simulate actual clinical decisions. Focuses on the menu of molecular diagnostic tests available in modern molecular pathology or clinical laboratories that can be applied to disease detection, diagnosis, and classification in the clinical workup of a patient Explains how molecular tests are utilized to guide the treatment of patients in personalized medicine (guided therapies) and for prognostication of disease Features an ancillary website with self-testing exercises where decision trees can be employed to simulate actual clinical decisions Highlights new technologies and approaches of applied molecular pathology and how discovery-based research will yield new and useful biomarkers and tests

Real Estate Record and Builders' Guide New Press, The
The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and seagoing, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

The Eve of Spain Springer

OPEN ACCESS The analysis of land management, lineage and family through the case study of early modern Spanish nobility from sixteenth to early nineteenth century is a major issue in recent historiography. It aims to shed light on how upper social classes arranged strategies to maintain their political and economic status. Rivalry and disputes between old factions and families were attached to the control and exercise of power. Blood, land management and honour were the main elements in these disputes. Honour, service to the Crown, participation in the conquest and 'pure' blood (Catholic affiliation) were the main features of Spanish nobility. This book analyses the origins of the entailed-estate (mayorazgo) from medieval times to early modern period, as the main element that enables us to understand the socio-economic behaviour of these families over generations. This longue durée chronology within the Braudelian methodology of the research aims to show how strategies and family networks changed over time, demonstrating a micro-history study of daily life.

The way speakers in multilingual contexts develop own varieties

in their interactions sheds light on code switching and multimodal dynamic co-constructions of grammar in use. This volume explores the intersection of multimodality and language use of multilingual speakers. Firstly, theoretical frames are discussed and empirical studies involving Catalan, German and Spanish as L1, L2 or FL are presented interconnecting verbal and gestural modalities into grammar description or exploring actions as sources for gestures, which may nonverbally represent the argument in German dynamic motion verbs. Other chapters focus on positionings in interviews, lexical access searches or proxemics in greetings and farewells. The contributions secondly focus on verbal features of language use in multilingual contexts related to self-representation and co-construction of identity through code-switching, deixis or argumentative reasoning in different communicative events based on multilingual data of languages including Croatian, English, Italian, Brazilian-Portuguese and Polish. The findings call for a reviewed conception of grammar description with implications also for the conceptualization of deixis, for L2/foreign language acquisition and language teaching policies.

Orthographies in Early Modern Europe The Eve of Spain
Myths of Origins in the History of Christian, Muslim, and Jewish Conflict

A helicopter ride to visit troops in the Afghanistan war zone, a tense meeting with the newly elected Prime Minister, and...a wild boar hunt! Eleni Kounalakis was forty-three and a land developer in Sacramento, California, when she was tapped by President Barack Obama to serve as the U.S. ambassador to Hungary under Secretary of State Hillary Clinton. During her tenure, from 2010 to 2013, Hungary was a key ally in the U.S. military surge, held elections in which a center-right candidate gained a two-thirds supermajority and rewrote the country's constitution, and grappled with the rise of Hungarian nationalism and anti-semitism. The first Greek-American woman ever to serve as a U.S. ambassador, Kounalakis recounts her training at the State Department's "charm school" and her three years of diplomatic life in Budapest—from protocols about seating, salutations, and embassy security to what to do when the deposed King of Greece hands you a small chocolate crown (eat it, of course!). A cross

between a foreign policy memoir and an inspiring personal family story—her immigrant Greek father went from agricultural day laborer to land developer and major Democratic party activist—Madam Ambassador draws back the curtain on what it is like to represent the U.S. government abroad as well as how American embassies around the world function.

The 7th International Workshop on Fuzzy Logic and Applications, held in Camogli, Italy in July 2007, presented the latest findings in the field. This volume features the refereed proceedings from that meeting. It includes 84 full papers as well as three keynote speeches. The papers are organized into topical sections covering fuzzy set theory, fuzzy information access and retrieval, fuzzy machine learning, and fuzzy architectures and systems.

Catálogo de la biblioteca de Salvá Routledge

"Software Tools and Algorithms for Biological Systems" is composed of a collection of papers received in response to an announcement that was widely distributed to academicians and practitioners in the broad area of computational biology and software tools. Also, selected authors of accepted papers of BIOCOMP'09 proceedings (International Conference on Bioinformatics and Computational Biology: July 13-16, 2009; Las Vegas, Nevada, USA) were invited to submit the extended versions of their papers for evaluation.

Remaking the Nation JHU Press

Focuses on digital violence and discrimination, cybercrime, digital transformation, and practices and studies related to digital violence. The book introduces and guides users through current best practices, laboratory methods, policies, protocols, and more within international digital violence and discrimination.
