The New York Times bestselling author of Bitter Brew chronicles the birth and rise to greatness of the American auto industry through the remarkable life of Harley Earl, an eccentric six-foot-five, stuttering visionary who dropped out of college and went on to invent the profession of automobile styling, thereby revolutionized the way cars were made, marketed, and even imagined. Harleys Earl's story qualifies as a bona fide American family saga. It began in the Michigan pine forest in the years after the Civil War, traveled across the Great Plains on the wooden

wheels of a covered wagon, and eventually settled in a dirt road village named Hollywood, California, where young Harley took the skills he learned working in his father's carriage shop and applied them to designing sleek, racy-looking automobile bodies for the fast crowd in the burgeoning silent movie business. As the 1920s roared with the sound of mass manufacturing, Harley returned to Michigan, where, at GM's invitation, he introduced art into the rigid mechanics of auto-making. Over the next thirty years, he functioned as a kind of combination Steve Jobs and Tom Ford of his time, redefining the form and function of the country's premier product. His impact was profound. When he retired as GM's VP of Styling in 1958, Detroit reigned as the

manufacturing capitol of the world and General Motors ranked as the most successful company in the history of business. Knoedelseder tells the story in ways both large and small, weaving the history of the company with the history of Detroit and the Earl family as Fins examines the effect of the automobile on America's economy, culture, and national psyche.

"Slow violence" from climate change, toxic drift, deforestation, oil spills, and the environmental aftermath of war takes place gradually and often invisibly. Rob Nixon focuses on the inattention we have paid to the lethality of many environmental crises, in contrast with the sensational, spectacle-driven messaging that impels public activism today.

An Introduction to Modern Vehicle Design Psychology Press

Within the last thirty years there is a growing acknowledgement that prevention of catastrophic failures necessitates engagement of a large pool of expertise. Herein it is not excessive to seek advice from disciplines like materials science, structural engineering, mathematics,

physics, reliability engineering and even economics. Today's engineering goals, independently of size; do not have the luxury of being outside a global perspective. Survival of the fittest integrated markets and financial systems require a web of safe transportation, energy production and product manufacturing. It is perhaps the first decade in engineering history that multidisciplinary - proaching is not just an idea that needs to materialise but has matured beyond infancy. We can witness such transition by examining engineering job descriptions and postgraduate curricula. The undertaking of organising a conference to reflect the above was not easy and definitely, not something that was brought to life without a lot of work and commitment. The 1 Conference of Engineering Against Fracture from its conceptual day until completion was designed in a way of underlying the need of bringing all the key players on a common ground that once properly cultivated can flourish. To achieve that the conference themes were numerous and despite their, in principle notional differences, it was apparent that the

attendees established such common ground through argumentation. The reader can see this from the variety of research areas reflected by the works and keynote lecturers presented. *Every Model from 1948-1976* Elsevier Product lifetimes are critical for the circular economy, resource efficiency, waste reduction and low carbon strategies for sustainability, and are therefore of interest to academics from many different disciplines as well as original equipment manufacturers (OEMs) and other stakeholders. The challenges related to product lifetimes must be tackled from multiple perspectives, making the sharing of knowledge and expertise from different disciplines particularly important. This book presents papers from the second Product Lifetime and the Environment (PLATE) conference, held in Delft, the Netherlands, in November 2017. The conference originated from the desire to bring together academic researchers working in the field of sustainability to benefit from each other's knowledge and further advance the field. The book includes the 88 full papers delivered at the conference, grouped according to the

following 7 conference themes: design for product longevity; product lifetime optimization; cultural perspectives on the throwaway society; circular economy and product lifetimes; business opportunities, economic implications and marketing strategies; consumer influences on product lifetimes; and policy, regulation and legislation. The book will be of interest to all those concerned with sustainable consumption, circular economy and resource efficiency.

Allan Braham's comprehensive treatment of this brilliant and complex period introduces the reader to the major buildings, architects, and architectural patrons of the day. At the same time, it explores the broader determinants of architectural production: the rapid economic expansion of Paris and the main provincial centers and the increasing demand for improved public amenities--theaters, schools, markets, and hospitals. This generously illustrated book provides a vivid commentary on society and manners in pre-Revolutionary France.

"Don't start an art collective until you read this book." —Guerrilla Girls "Ever since Web 2.0 with its wikis, blogs and social networks the art of collaboration is back on the agenda. Collectivism after Modernism convincingly proves that art collectives did not stop after the proclaimed death of the historical avant-gardes. Like never before technology

reinvents the social and artists claim the steering wheel!" —Geert Lovink, Institute of Network Cultures, Amsterdam "This examination of the succession of post-war avant-gardes and collectives is new, important, and engaged." — Stephen F. Eisenman, author of *The Abu Ghraib Effect* "Collectivism after Modernism crucially helps us understand what artists and others can do in mushy, stinky times like ours. What can the seemingly powerless do in the face of mighty forces that seem to have their act really together? Here, Stimson and Sholette put forth many good answers." —Yes Men Spanning the globe from Europe, Japan, and the United States to Africa, Cuba, and Mexico, *Collectivism after Modernism* explores the ways in which collectives function within cultural norms, social conventions, and corporate or state-sanctioned art. Together, these essays demonstrate that collectivism survives as an influential artistic practice despite the art world's star system of individuality. *Collectivism after Modernism* provides the historical understanding necessary for thinking through postmodern collective practice, now and into the future. Contributors: Irina

Aristarkhova, Jesse Drew, Okwui Enwezor, Rubn Gallo, Chris Gilbert, Brian Holmes, Alan Moore, Jelena Stojanović, Reiko Tomii, Rachel Weiss. Blake Stimson is associate professor of art history at the University of California Davis, the author of *The Pivot of the World: Photography and Its Nation*, and coeditor of *Visual Worlds and Conceptual Art: A Critical Anthology*. Gregory Sholette is an artist, writer, and cofounder of collectives *Political Art Documentation/Distribution* and *REPOhistory*. He is coeditor of *The Interventionists: Users' Manual for the Creative Disruption of Everyday Life*. "To understand the various forms of postwar collectivism as historically determined phenomena and to articulate the possibilities for contemporary collectivist art production is the aim of *Collectivism after Modernism*. The essays assembled in this anthology argue that to make truly collective art means to reconsider the relation between art and public; examples from the Situationist International and *Group Material* to *Paper Tiger Television* and the Congolese collective *Le Groupe Amos* make the point. To construct an art of shared experience means to go beyond

projecting what Blake Stimson and Gregory Sholette call the “imagined community”: a collective has to be more than an ideal, and more than communal craft; it has to be a truly social enterprise. Not only does it use unconventional forms and media to communicate the issues and experiences usually excluded from artistic representation, but it gives voice to a multiplicity of perspectives. At its best it relies on the participation of the audience to actively contribute to the work, carrying forth the dialogue it inspires.” —BOMB McGraw Hill Professional

This is the first significant publication to explore the output of Matt Keegan, the New York-based artist known for his work across mediums, as well as independent publishing including the acclaimed edited art journal North Drive Press. This monograph expands on a recent solo exhibition by the artist at Rogaland Kunstsenter; Stavanger, Norway, titled “Portable Document Format.” The show was organized as an idiosyncratic

retrospective, with Keegan remaking sculptures dating from 2006 to 2015, initially fabricated in Sheetrock and steel, in cardboard. Like the exhibition, the publication serves both as a project and a reference for the artist's work. Essays by Tom McDonough and John Miller theorize Keegan's production, while interviews with Sara VanDerBeek and Anna Craycroft underscore the artist's ongoing engagement with his peer group. Furthered by contributions from colleagues Uri Aran, Leslie Hewitt and James Richards, situated alongside full-color installation photos and reproductions of work from the past decade, Matt Keegan: OR provides a solid introduction and layered overview of the artist's multifarious practice.
